

The Do's and Don'ts of storing hydrogen water

What bottles/containers should you not use?

Plastic bottles/containers
that are not BPA free

Why shouldn't you use plastic
bottles/containers that aren't
BPA free?

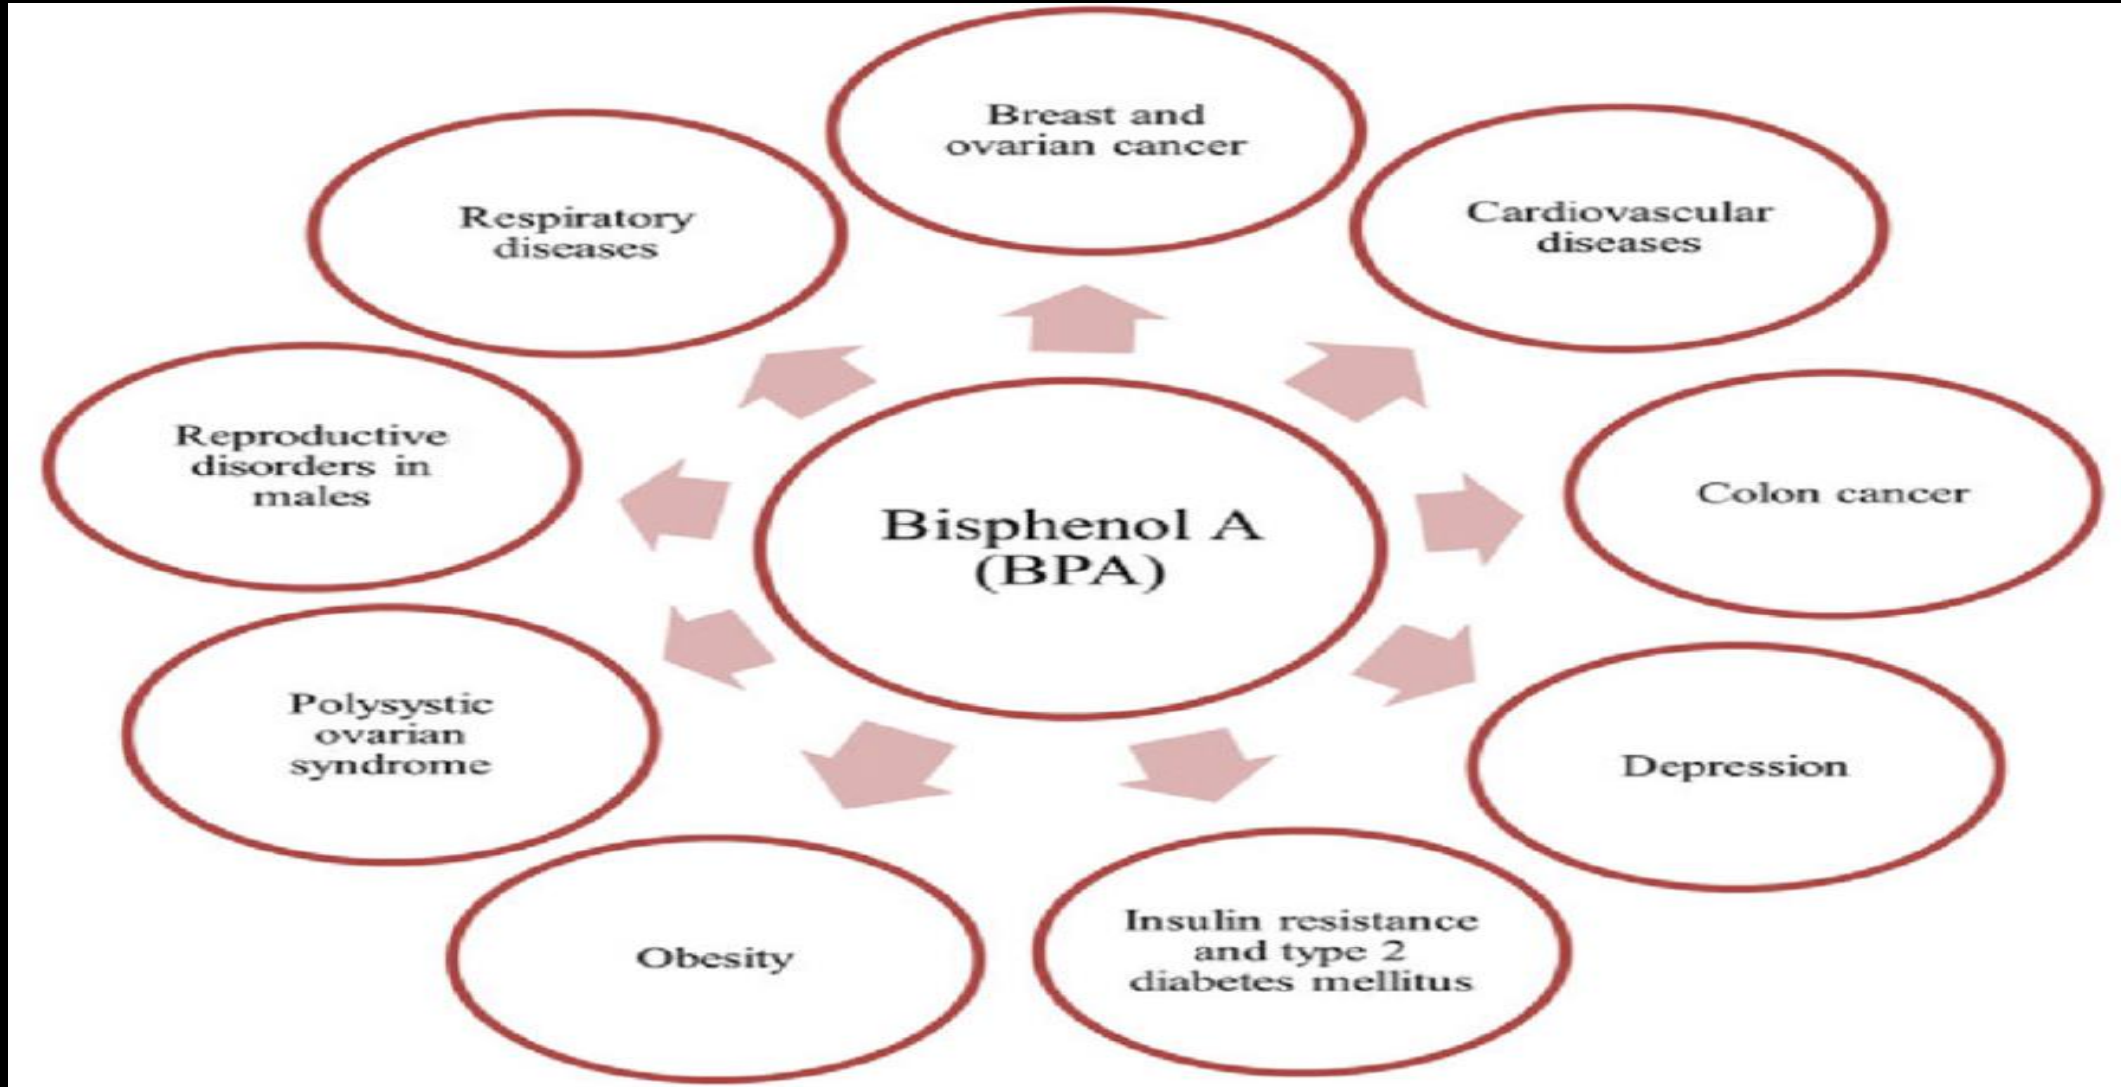

Because it can cause chemicals
to leach into the water and cause
health concerns

What is leaching?

Leaching is a transfer or leaking of chemicals from the plastic to the foods or beverages it contains. Some of the chemicals found in plastic include polycarbonate, which leaches bisphenol A; polystyrene, which leaches styrene; and polyvinyl chloride, which breaks down into vinyl chloride.

Harmful effects of BPA

What bottles/containers should you store hydrogen water in?

BPA free plastic bottles

Glass bottles

Stainless Steel bottles

Hydration Packs
